

Master Plan of Sisak New Port

Period of performance: 2013

Croatia's Sava River is part of the Pan-European Corridor X. Within the work of the International Sava River Basin Commission a comprehensive plan for the rehabilitation of the Sava waterway was elaborated. Sisak New Port – only 65 kilometres from the capital Zagreb – is an important element of Croatian Waterway Transport Policy and the rehabilitation of Sava waterway. The integrated project approach foresees the new port as a hub for waterborne transport chains and a multimodal logistic node.

As part of the project “Technical Assistance for the Master Plan of Sisak New Port” ÖIR analysed the potential for the development of international freight traffic in the Sava corridor and forecasted the transshipment potential for the planned new port in Sisak.
